Buck,

I searched for rack servers but I was not able to find one that meets your needs. Here is the quote of the server that I sent you earlier with the correct raid controller. As for the quotes you received from tiger direct the only things that I would question would be why 667 memory's and are the hard drives on those systems cable or hot plugged. Though the processor is very nice I would suggest into looking on those other things. If you have any questions feel free to reply.
